

Ravensby Glass in association with Screenline can now offer sealed units with integral blinds.

Screenline is a revolutionary system that allows blinds to be incorporated inside a sealed unit and operated externally by means of magnet, with no break in the sealed unit seal.

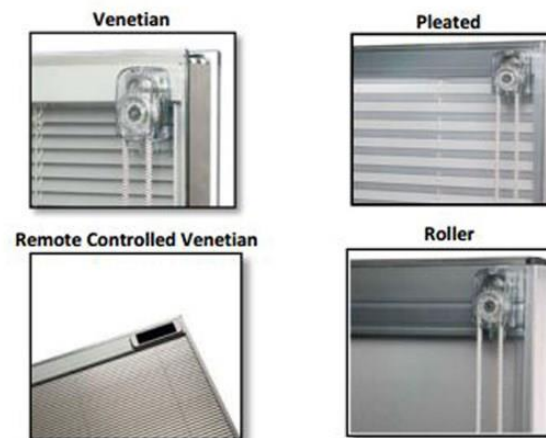

The blinds can be raised, lowered or tilted by the magnet, which is operated by either a pull cord or by an external motor.

Benefits:

- Blinds remain free from accidental damage
- Cords can be easily removed when not required
- Direct sunlight is reduced
- Windows easier to open
- Sills kept free
- Maintenance free

Available in different styles including: venetian, pleated and roller blinds. Remote controlled motorised blind options are also available.

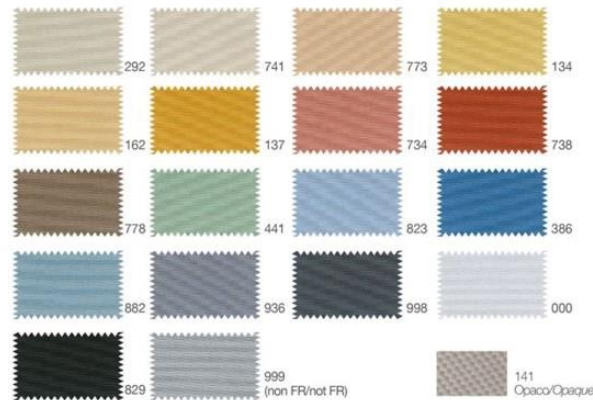

The major benefit of this system is that the blind will never need to be cleaned, and the blind cannot interfere with the cleaning of the glass.

INTEGRAL BLINDS COLOUR OPTIONS

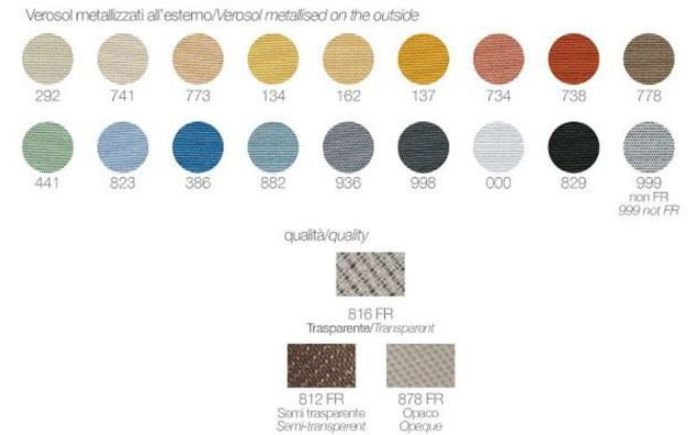

SL20-22C Venetian

SL20-22C Pleated

SL27C Roller

ScreenLine® SL20-22C is a patented magnetic system with manual operation (raising and tilting function) for venetian blinds incorporated within 20-mm or 22-mm insulating glass units.

ScreenLine® SL20-22C Pleated is a patented magnetic system with manual operation (raising function) for pleated blinds incorporated within 20-mm or 22-mm double or triple glazing units and featuring Verosol® fabrics, which are coated with an aluminium layer on one side.

ScreenLine® SL27C Roller is a patented magnetic system with manual operation (raising function) for roller blinds incorporated within 27-mm double glazing units and featuring Verosol® fabrics, which are coated with an aluminium layer on one side.
