

8 very good reasons to choose ScreenLine®

- clean for life
- no risk of damage
- long life
- maintenance free
- excellent light and solar control characteristics
- durable components
- guaranteed privacy
- linear design allows greater use of internal area

Pull cord operation

Slider operation

Ravensby Glass in association with Screenline can offer sealed units with integral blinds. Screenline is a revolutionary system that allows blinds to be incorporated within a sealed unit and operated externally by means of a magnet, with no break in the sealed unit seal.

The blinds can be raised, lowered or tilted by the magnet which is operated by either a pull cord, slider or an external motor.

Benefits:

- The blind will never need to be cleaned and does not interfere with the cleaning of the glass
- Blinds remain free from maintenance and accidental damage
- Cord can be easily removed when not required
- Direct sunlight is reduced
- Windows are easier to open
- Window sills are kept free
