

LAMINATED GLASS

Coloured Laminated

Ravensby Glass now offers Coloured laminated glass, comprising two or more panes of glass bonded together using tinted PVB interlayers. Different combinations of glass thicknesses and numbers of interlayers provide a range of different performances in a choice of colours.

Our Laminated glass is manufactured in accordance with EN 14449 and tested in accordance with EN 356 and BS EN 12600 meeting an impact performance of up to class 1, to ensure that the glass can resist different levels of impact, creating a safe and secure barrier.

PRODUCT DESCRIPTION

The coloured PVB interlayers absorb up to 99.5% of ultra violet light, helping to reduce fading and ageing effects. When combined with different glass types and thicknesses, improved acoustic performance is achieved as the PVB interlayer helps to absorb sound energy, creating a more relaxing environment within the building. Our coloured laminated glass is the ideal product for any number of commercial or decorative applications.

AVAILABLE COLOURS

Fact file

- Ideal for decorative or architectural applications
- Break safe characteristics
- Provides UV protection

Sizes Available:

6.4mm, 6.8mm, 8.8mm,
