

Glass Thicknesses available:

Toughened glass up to 19mm
Certified to BS EN 12150

Standard laminated up to 16.8mm
Certified to BS EN14449

Toughened Laminated up to 25.5mm
Certified to BS EN

Our balustrades are compliant with
BS6180 and BS6399

At Ravensby Glass we have a large processing department with 3 CNC machines which accurately process glass balustrades. Our CNC machines enable us to create a high quality finished products that have polished edges, drilled holes and intricate cut outs.

We manufacture toughened laminated glass in-house using our Glaston Tempering Furnace and our Pujol Laminating machine.

Our toughened laminate glass utilises **PVB** and **EVA** interlayers offering a solution to high level safety and barrier loading requirements.

EVA interlayers are weather resistant which prevents weather shrinkage, ideal for external balustrade installations for a long lasting performance.

PVB interlayers are available in thicknesses of 0.38, 0.76 and 1.5mm.

The range also includes a low iron glass which offers a noticeable clearer panel than the inherent green hue of standard
