

## Wick High School, Wick, Products- Planitherm Ultra Laminated

We are delighted to revive our quarterly Newsletter after a lengthy absence! Our marketing department has seen a transition from its previous incumbent Amy Judge to the new holder of the post Emma Dickson who has settled into this post to such an extent that she is the sole author of this newsletter.

The façade industry is enjoying an extremely buoyant period with the most of our commercial processing departments stretched to capacity which is throwing out many challenges for our supply throughout the UK. The domestic factory, including the CNC processing centre, is also running through a busy period whilst supplementing some commercial glass supply.

Please do continue to visit our website which has been regularly updated with new products, including our Solar Shield roof glass and a new Yorglas decorative glass range.

Wishing everyone a continuing sunny summer!!

Scott Duncan- Commercial Director

## Recent Projects

### Swansea University

Project:

Swansea University

Navitas

Crymlyn Burrows

Product: Planitherm one

Anti sun grey

---

---

Transformation of Grand Central Hotel formerly Windsor House Hotel, Belfast

Project: Grand Central Hotel

Product: Superneutral SN51/28 with Kawneer toggles

## Coming Soon... Instant online quote and ordering for Colourlite Splashbacks

To keep up to date with modern technologies. We aim to make it faster and easier for customers to receive a price and order their splashbacks.

Ravensby are in the process of creating a new section of our website where you can receive instant Quotes of Colourlite Splashbacks and can also place your order from this.

After monitoring and receiving feedback from the success of this project we may then progress to online ordering of other products.

## New Heat Soaking Plant

Ravensby have now invested in a third Heat Soaking Plant to facilitate the continual increasing demand for both heat soaked high specification commercial units and toughened laminated panels for the balustrades and stairs sectors

Heat Soaking is the process for reducing the possibility of nickel sulphide toughened fractures by simulating the potential of nickel inclusion movements in any particular pane of toughened glass.

## New UV resistant polythene

We are delighted to advise that after a period of research we are beginning to wrap all our stillages for commercial site deliveries in a UV resistant polythene. It has always been an advisement that to protect the polysulphide edge seals of the insulated units from UV degradation, all glass stored on site must be under cover. This innovative UV protection polythene now offers site storage outside without the issue of UV breakdown of the edge seals prior to installation. However it is imperative the polythene must remain intact whilst the stillage is stored outside. For any further information please do contact the Ravensby commercial offer.

## New Office Staff Member

Gillian joined us, as the Quality Control Inspector, at the start of April 18. She carries out daily and weekly Quality checks, and assists with Quality improvement initiatives and site / customer visits.

Gillian has worked in various Quality roles for 20 years.
