

The fenestration sector has experienced recent significant uplift in demand for high specification products incorporating annealed laminated glass. The quality of the laminated edgework within a commercial façade installation is critical to ensure the potential for future thermal fractures is significantly reduced. The Forel Vertical Edging machine is engineered to produce this high quality.

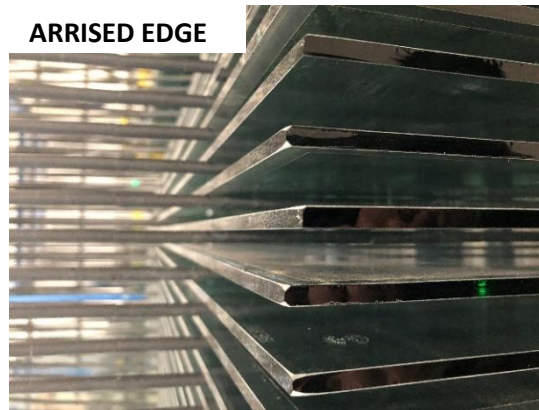

- To comply with thermal safety checks for annealed laminated, solar control glass in particular requires smooth ground edges from poor cut or arrised edges.
- The Vertical Edging machine offers an arrised, ground and a smooth ground edge. Furthermore will offer an excellent high sheen edge polish for balustrade glazing.
- The Edging machine can accommodate a maximum glass size of 5000mm x 2800mm and a maximum thickness of 19mm.
